|------------------------------|--|-----------------------------|---------------------|
| Generic Name | Technetium TC-99M Tetrofosmin Kit | Innovator | GE Healthcare |
| Dosage | 1.38 mg/vial ; Intravenous Injection | Branded US Sales | Less Than \$1000 mn |
| Probable FTF | None | Known Para IV Filers | None |
| Other ANDA developers | None | Tentative Approvals | None |
| Final Approvals | None | Generic Launches | None |
| Indication | MYOVIEW is a kit for the preparation of technetium Tc99m tetrofosmin for injection. Technetium Tc99m tetrofosmin injection is a radioactive diagnostic agent indicated for the following: * Myocardial perfusion imaging under rest and/or exercise or pharmacologic stress conditions to delineate regions of reversible myocardial ischemia or infarcted myocardium in patients with known or suspected coronary artery disease, * Assessment of left ventricular function (left ventricular ejection fraction and wall motion) in patients with known or suspected heart disease. | | |
